manusha was fourteen years old she had the chance to go to school and even could use internet at times in the 20 km away city where she went everyday to school on her bike her parents were investing all they could to pay for the admission fees of the private school ... it barely was enough they earned from mother selling the pineapples and cacao on the local market ... so manusha thought in 2017 when there was this news talks of a german lead g20 investment framework what would allow private investments to be funneled in ... i will talk to my teacher about it and we will write an application towards this ... campact for africa thing... proposing millions of 2000 money grants given to higher grade students all over the world whose parents earned too little to live safely in security and ... the grants would be tied to building machinery and robots and ai software what could be used to allow their parents to earn more money lift less weights hunger not live comfortably earning more than enough money for the daughters school... of course she thought that she would much less need to be in the city to access internet and books via adult teachers libraries etc. when she would have the thousand parts ai robot self assembly kit .... she knew how to build it , loves mathematics and physics.chemitstry biology stuff

me and my friends both in the classroom of this expensive private in a city in the heart of africa ... or the center perhaps .. congo bassin the middle of africa ... and all my online friends with whom i have allready put together some of the codes we could apply to the robot helpers

the teacher of manusha was only too happy to receive such an intelligently thought out proposal school board too gave their blessing and not long after that a hundred page listing and description of what manusha and her online friends as well as local citizens have composed allready as a wishlist how this 2000 grant to each member of the youth supported ai robot companion helper movement would ask to receive from a private investor who would give money with or without conditions ... in the youth descriptions there would be short passages on how many african people have been stolen from their continent and enslaved into a submissive social position on an other continent... the attrocity of the act of abducting someone to declare the person to be property of an other person ... absurd and sadly has happened for too many centuries years minutes seconds... their was a clear preference in the young peoples application that the 2000 worth.hard and software self assembly kit ... the plastic or eventually also live cells printing 3 dimensional printer

that this grant would best be given on no conditions as a free giving without expecting anything back in return for it appologies or not ... the material present would be the much worth the freer it is given ... the more joy an investor would feel knowing hoping that this 2000 would help undo what 100 000 sends or millions of damage people of the same nationality or skin colour family ... have done to congolesean villages

in 2018 the grants were payed either in form of cash and or digital currencies ... with most of the 200 000 grants in 2018... 20 millions in 2019 ... beying paid were coming as free presents nothing attached ... total anonymousity was possible but again most of the members of the financial giving party were ready to engage publicly or at least if there were further needs of cash investments reparation style ... and most of the free giving people were ah so happy to be mentioned in a selfless giving scheme what did not ask for acknoledgment of past guilt but asked for unconditional money donations and hardware parts software licences ...for first generation solar panel batteries microchips 3d printer hard to make byself stuff no apollogy expressly needed but given in a somewhat reparation mood .. like... if my family or nation or skin colour ethnicity has done wrong to your tribe your nation your same skin coloured family ... it is right that we pay up now some investment into local communities who have lost so much family members to white man colonialization drives

it is a small sum compared to what white skin owes coloured skins... the 2000 per family to another family was being written about the recommended amount of investment ... in this fantasy novel ... fantasy bubble... millions and millions of above avarage income generating families in industrialized nations all over the globe wanted to sponsor a teenager saving their mothers and fathers back with exosceletons and self schooling themselves
the private school teachers were all too happy having less older children in their classes so they could concentrate their attention distribution onto younger.students who needed the basic reading and writing simple calculations

manusha and millions others in africa south america asia australia ... were leaving school with the day the money donation was transfered ... thisway their parents were free again to send an other smaller child of manushas sisters and brothers ... to this private school what supported manusha to sketch together with thousand of others like her teenagers 14 to 25 ... all over the globe who wanted to build that maima like ai robot to help saving their parents backs

for the ascende andreas yesterday decided to become to... one who can allways reinvenft an other strolling in the parks of storytellfantasia... manusha not even an african name but from india signifying human or being human ... but andreas ascende did not counciousnessly knowing manusha ... not thinking that it would be a genuine african perhaps ... but possibly down to earth sound of a name what could go well with an african girl... he was he is as andreas mayloveheal androgyneas ascende ... as the white male man in his forties guilt laden on colonial crimes his own etnicity has done to other ethnicities ... what white tribes have done bad to coloured tribes ... trains himself writing as the opposite character ... the teenager girl from africa ... the female adolescent who suffered the most in all the colonialized countries

he jumps from ascende on the beach maima rebuilding itself under the trees... timeline 2019-2022 to a totally new one just triggered by a newspaper article on compact for africa ... i think i wrote it wrong last time and might unintentionally have used a name of an existing organisation what does all the good defending environment and social issues stuff

... this compact or campact ... for africa thing gave andreas a birthing ascende motivation ... like .. if they are going to quietly pay money into the south ... i would like to accompangy the investment framework with some critical fantasy wishfull fantasy utopia flavour story writing ... or was it that andreas now decided to just be ascende no matter how well chewed he ate and how well his body harmony was ... that gave ascende the kick to honour the real world mass counciousness newspapers mand political plans ... with alongsiding and begging for some handout money no strings attached ... ah but blockchain data sets allowing allways to add data later ... begging in the sense that manusha would beg ... no way ... the hundred pages were written sassy and frank ... we offer you investment possibility into a future with less pain and less work done unwillingly ... if our millions of exosceleton designs all open sourced and tested and video audio all data openly deposited in blockchain global ai tubes collective brain tank ... if you fat cats gives us sleek birds some grain we will outfly you and you will loose the fat become modest cats what eat grass and berries instead of young birds ... the motivation here is the multispecies fantasy ascende entertains ... oh no it is andreas androgyneas ... but he became ascende yesterday ... uuuh separation collision alert ... and no ... we are all one ... no matter if andreas or ascende ... the two wanting to be one and searching f

it creates a whole lot of other lines to think about why ascende switches at his birth moment to manusha ... like ... she suffers more ... let her have ai robot self assembly kit before i decide to get my fingers of the keyboard typing fantasy reasons why it is important for ascende and andreas to understand why manusha is more important to tell the story of than the white male 42 years old authors fantasies how he could become superman and save the human race ... was it good even to save humanity what un necessarily but later by certain individuals plundered intentionally the planet and each other ... was a species who has harmed more than healed sofar worth saving ... nobody knows perhaps ... but andreas ascende feels all too noble to think of him generously leaving the center of future attention with inventing the munusha story character... ah munusha the 14 year old black african girl in congo ... fantasy allright ... it may be also the pressure ... what would ascende do next after maima is build to fifth generation mary the lifeship constantly remodeling her being a flying home to ascende maima and their guests ... what would happen to perma how would she continues her research in becoming what one hungers for ... oh no ... again the author tries to tie himself down by throwing out a searching anchor into other allready written storylines ... importing this or that allready available lines indirectly by mixing them in now here or there ... it is not so much generou

generosity ... but more like saying ... yoou out there reading this future me or an other human alien ai robot being ... it was not generous but his contribution towards global justice ... writing from the perspective of a 14 year old congolesian black female human being adolecent ... is a therapeutical approach to become one ... white male after

forty inventing a fantasy teenager who would heal past dramas with future utopian deeds ... like... becoming father of a teenager one has not been with the first years of ones life ... ... this healing writing is as much an experiment for the author as he does not want to talk too much of his private life ... no andreas has no 14 year old daugther in congo ... but andreas wants to learn from manusha talking trough time and space crossing stotmrylines from all to all sides ... manusha symbolizing all the 12 to 28 years old human beings living now... you are the future i hope what will be fair to nature and mild to each other ... your spirits might bless me ascende by joining this river of words glowing flowing into a better tomorrow ... when its not yet all said and done ... when our future is still open wether disapearance or revival and resetting our civiization to become nice and humble ... again ?... not accepting nuclear radioactive waste poisoning the global industrial nations do ongoingly risk the health of the local human animal plant community but with it the whole planet ... nuclear waste producing generators as wel

as well as fission bombs are somewhat a monstrosity when one knows of the danger radioactive waste poses to all human animal plant ... killing needlessly is monsterous anyway ... hunger and selfdefence when attacked being some times kill would be okay ... perhaps not ... to not kill ... a good suggestion allways in all sects

all kinds of self sabotizing thouths patterns tried to critizise this manusha fantasy character creation... but then andreas wanted to write an uplifting fantstic journey of ai robot assisting parts of humanity to be fair to each other and the host planet ... not a depressing masked labyrinth of biographical notes and selfreflections why the author would choose exactly this caracter to take over after ascende got born in 2017 spring storyline ... again a flyoff leading nowhere but in uncertainity ... andreas allways was will be ascende wether in writen down speculations or in versions lived but not documented ... and manusha is one of several experimental story caracter studies to both pepp up the storyline and heal his own real life white male guilt trip ... and also it helps andreas to become androgyneas in this moments he writes thinking of manusha

the author trying to think like a 14 year old female being ... one could say disadvantiged by history dramas ... but one could also say done wrong but still not giving up the strife for a sovereign life ... living a life according to one s ideals ... ascende was not manusha nor could he ever be ... but he would learn from inventing her ... learn to be a young female human with all the dangers involved getting badly treated by men... white middle or old aged man who needed a manusha like mask or podest to tell their utopian future expectations from... nah again wrong ... it is the experience of being female and hopefully it leaving some androgyneouity in andreas after he wrote dreamed up manusha

european north american western civilizations families donated in 2018-2020 around 100 million children a most of the times unconditional one time sum of 2000 ... resulting in a payback of 200 billions what is a small percentage of the trillions western civilzation owns victim societies in the south west and east... europe owes the rest perhaps 100 to 1000 trillions of todays avarage.money value like euro francs dollars sterling pounds ... so 200 billions would be like 0.2 percent or 0.02 percent of the material damage reparated ... or counting it otherwise ... when perhaps hundred million of white europeans have enslaved 11 million and their descendants for 350 years ... and en plus have emptied out half or a third of the.colonized regions ressources burried in the ground ... possibly half or a third of western civilization associated families private wealth resulted from the colonization crime robbery murders eras involvement with of course the hundred million europeans mostly not profiting from their most of the times reluctant agreement ... perhaps 1 million or 10 000 were sacking the gold and.diamonds the money from selling stolen crude oil ... and the other 99 percent of western society families were ashamed of their elected or suffered under politicians who supported slavery and colonization and environmental plunderings and poisonings ...
100 million europeans in 1500 the author speculates ...

families in europe in 2018 -2020 were donating 200 billions ... nations and corporations and billionaires were investing another 2000 billions ... 2 trillions 2018-2020... they were investing in middle scale whollistic production facilities like bioplastic filament producers bicycle electrocar mini tractor factories ... street building projects executed by local cooperatives working collectivly across continents

... underground railway lines and hyperloop tubes were built across hundreds of kilometers.to assist otherwise mostly personal drive on surface road with electro wheels or even better propelled over the mountains with a zeppelinb.... andreas ascende was no fan of making holes in holy stones unnecessary ... so tunnel digging is a less ideal solution compared to gently travel in the air not troubling earth... a mountain is a living being and it shows a lack of respect to dig deep holes into a mountain... no problem an eremit who cuts with his fingernails into a mountain or with a stone axe ...like ... maximum 10 or 50 meters deep ... to build a cave to profit of the mountains protection and inner warmth natural radioactive waves ... but no way a more than 10 km tunnel would be found good reasons for ... this just to say ... andreas ascende being of swiss citizenship and not agreeing with tunnels boring into the alps ... either for international transport nor military reasons ...

oh yes ascende back on the scene again ranting about tunnels being bored needlessly and a bit shaming humanities respect towards 3000 meter high fels formstions massive.stone giants ... how would i as a mountain like it when little humans would cut.a tunnel trough my feet and spend all day and night driving back and forth most.of the times without having any need for it ... how would that feel compared of the thousands of 2 m.sized humans ... compared to 3000 meter ... 0.15 percent ? the size beings flying over the mountains top and mountains shoulders ... flying over would be the less painfull perhaps even enjoyable option... if at all ... why could humanity just walk up to 1400 meters and lie on a piece of grass cultivated by rewilded goats pigs horses cows dogs ... and watch the clouds playing 1500 meters higher on the near mountains ... instead of transporting themselves and food and parts of zeppelins back and forth.
